

Demountable Holder Rack for Bulk Bags

Product Overview

Demountable Holder Rack for Bulk Bags

- This bulk bag holder is a stackable and also demountable and can take tonne bags or FIBC (Flexible Intermediate Bulk Containers) big bags or bulk bags of 1000 litres.
- This robust rack holder is manufactured from mild steel with a mesh rack base and then galvanized for a long life for bulk bag holding outside. Suitable for holding 1000 litre bulk bags and 1 tonne builders bags.
- The bulk bag holder corner posts lift out of the frame base allowing the FIBC stands to be stacked when not in use saving space.
- Please note, these are heavy duty bulk bag holders and designed for a long and robust dumpy bag holding life, they are not to be confused with the light weight single use builders bag frames often seen on building sites.
- We can supply longer posts to suit different sizes of bulk bags, please advise us of your FIBC bag post requirement.
