Weight of 1.5m Post	7.5kg each
Weight of 1.8m Post	9kg each

- This heavy duty stacking post pallet is quite simply brilliant value for money! Our TITAN post pallets are made in Europe and load tested & certified.
- This post pallet base can have post pallet stacking poles inserted in each corner to build the post pallets up into a tower. The height of the poles can be changed to suit your products or application.
- The use of post pallets can negate the need for pallet racks and pallet racking, especially for warehouse temporary racking or peak periods. Hoops are fitted to the underside of the post pallet for forklifts to safely pick up the post pallet.
- The post pallet stacking frames are made from prime quality steel and galvanized for a long and hard wearing life. Each pallet base is rated to 2000kg, and they can be stacked 4 high with a total load of 8 tonnes with 1.6m posts!
