Platform Width	1200mm
Platform Length	1200mm
O/A Length inc Steps	2420mm
O/A Height	2500mm
Capacity	1000kg
Construction	40 x 40 x 3mm box section
Slope	45°
Wheels (optional)	4 x 125mm Nylon

These new steps are ideal for filling skips. This ladder is made from 40 x 40 x 3mm box section and is at a 45° slope. The ladder has handrails to both sides and a safety surround to the top working platform with kick plates to 3 sides, as well as anti-slip walkway mesh on the treads and platform, allowing the ladder to be safe and secure when in use.

This is a 2 part construction, with the platform and the steps being 2 separate pieces which can be bolted together (nuts and bolts included), because this product is too big for typical lorries.

This unit has feet as standard so it is a static unit. As an optional extra, wheels can be added to allow the unit to be manoeuvred by hand — 4 swivel castors positioned on a front and back axle, attached to 2 separate brake levers on the front and rear which when engaged fully lift the wheels off the ground, leaving the unit sitting on its legs in a stable position ready for use.

Please call for a carriage price and to order.
