SL164R	1420	1270	570	1000kg
SL164R Galvanized	1420	1270	370	Toookg

- These scoop or shovel forklift tipping skips can be emptied directly from the forklift truck just by pulling a rope connected to the tipping lever. This allows goods to be easily, automatically and safely dumped, minimizing working time and eliminating the risk of injury.
- There is a safety device against accidental dumping.
- These extremely robust tipping skips are of a scoop or shovel type design and are especially suitable for the collection and unloading of all loose materials including snow.

The skips come in a range of standard RAL colours so that they can be colour coded for specific waste types if required, you can select the colour from within the options. Alternatively a galvanized finish is available.
