- These roll forward tipping skips are our heavy duty TITAN range and built like a tank. The skip of the tipping skip is fully seam welded and watertight and, as standard, the skip walls are 3mm thick mild steel, but we can offer an option for the skip to be made from 5mm steel plate
- The base of the tipping skip is 4 way entry, so a forklift can pick the skip up in any orientation.
- The base subframe is made from heavy box section so a perimeter frame sits on the ground and a second frame supports the tipping bin. This leaves a gap all the way around for the forklift and the base perimeter prevents the tipping skip from rolling off the forks.
- The tipping skip as standard is finished with 2 coats of anti-corrosive primer & topcoat paint for a long and hard life. As an option, we can fully galvanise the tipping skip
- All the Titan Skips are fully CE marked and fitted with operating instructions, a specification plate and caution labels
